Science, Technology, and Society (STS) is an exciting interdisciplinary field of study grounded in the history, philosophy, anthropology, and sociology of science and technology. It examines deep cultural roots of our technoscientific society and addresses pressing public policy issues. It constitutes a fundamental aspect of a liberal arts education and is excellent preparation for graduate study or future employment opportunities.

Science and technology have become increasingly important components of our world, changing the ways we live, work, and think. The well-being of individuals, nations, and ultimately our Earth depends in part on technoscientific developments that are part of the process shaping both the social fabric and the natural environment, both in America and globally.

Following an introductory core course, students in the STS Program choose from a variety of electives and complete a yearlong senior research project. By doing so they gain an understanding of the historical and social dimensions of science and technology, become better-informed citizens of our high-tech society, and hone critical and valuable interdisciplinary skills involving writing, speaking, and creative thinking. Students pursuing a major or minor in STS require no special technical expertise.

Requirements for the Major in Science, Technology, and Society

The STS major has a core curriculum based on the research and teaching interests of the faculty. All courses are either U.S. or internationally focused and either science or technology focused. Majors must take three required courses and choose a minimum of eight electives from the list of STS-approved courses below. Courses taken abroad or otherwise not on this list require the approval of the STS Program director.

- ST112: Introduction to STS (required)
- ST485: Technology Matters (required)
- ST486: Senior Project: The Craft of Research or ST484 Honors (required)
- One 200-level or higher course in natural science or computer science beyond the all-College requirement
- One STS internationally focused course (designated I)
- One STS U.S.-focused course (designated U)
- One STS science-focused course (designated S)
- One STS technology-focused course (designated T)
- Three approved STS electives

Electives are chosen from the list of STS-approved courses to fulfill the I, U, S, and T foci, but a course that satisfies two or more foci may not be counted twice. In choosing the eight electives, students must take a minimum of three courses designated or cross-listed as ST. A student may not count more than two 100-level electives toward the major.

Senior Projects

All senior STS majors will take ST485, which will prepare them for research through seminar readings, literature reviews, and proposal writing. This is the first part of a yearlong capstone experience in which students design and complete a final integrative project in science, technology, and society. This is followed by ST486, an intensive research and writing experience with final public presentations. Any member of the faculty may serve as an advisor for STS senior projects.

Honors in Science, Technology, and Society

Students with a 3.5 GPA in the major (and at least a 3.25 GPA overall) may request permission to undertake an honors thesis. They will enroll in ST485 and meet with other STS seniors to prepare a literature review and proposal, which must be approved by a panel of faculty members. Students continuing in the honors program will enroll in ST484 under the supervision of an advisor and second reader. Upon successful completion of the thesis and fulfillment of all requirements for the major, and if a 3.5 GPA in the major is maintained, the student will be invited to deposit a copy of his or her thesis in Miller Library and will graduate with "Honors in Science, Technology, and Society."
Requirements for the Minor in Science, Technology, and Society

Science, Technology, and Society 112, 485, 486, two other STS courses, and at least two courses from the list of STS-approved courses.

List of STS-Approved Courses

* Key: International = I; U.S. = U; Science = S; Technology = T

**Anthropology**
- 112 Cultural Anthropology I
- 256 Land, Food, Culture, and Power I
- 341 Culture, Mobility, Identity I

**Art**
- 252 Medicine and Visual Culture U, S
- 285 History of Photography I, T
- 454 American Art and Science U, S

**Biochemistry**
- 362 Medical Biochemistry S

**Biology**
- 133 Microorganisms and Society U, S
- 164 Evolution and Diversity S
- 259 Plants of the Tropics I, S
- 274 Neurobiology S
- 275 Human Physiology S

**Chemistry**
- 112 Chemistry for Citizens U, S
- 217 Environmental Chemistry S

**Computer Science**
- 151 Computational Thinking T
- 232 Computer Organization T

**Economics**
- 231 Environmental and Natural Resource Economics U
- 341 Natural Resource Economics U, S

**English**
- 262 Poetry of Revolution I
- 233 Data and Literature in the Scientific Revolution I, S

**Environmental Studies**
- 118 Environment and Society U
- 234 International Environmental Policy I
- 265 Global Public Health I
- 271 Introduction to Ecology S
- 319 Conservation Biology S
- 366 Environment and Human Health I, T
- 494 Problems in Environmental Science S

**German**
- 298B Weird Fictions I

**History**
- 245 Science, Race, and Gender S
- 246 Luddite Rantings U, I, T
- 354 Skin-scapes: Beauty, Skin, and Cosmetics in East Asian History I, T
- 364 Environmental and Health History in Africa I, S
- 394 Ecological History I, S
• 443 Research Seminar: 20th-Century Environmental History I, U, S, T
• 445 Research Seminar: Nuclear Madness I, U, T

Mathematics
• 376 History of Mathematics I, S

Philosophy
• 126 Philosophy and the Environment U, S
• 213 Philosophical Inquiries into Race I, S
• 297B Philosophy and the Scientific Revolution I, S
• 217 Feminism and Science S
• 317 Philosophy of Science S
• 318 Philosophy of Nature S
• 328 Radical Ecologies S

Psychology
• 233 Biological Basis of Behavior S

Russian
• 232 Science Fiction in the Great Utopia I

Science, Technology, and Society
• 112 Science, Technology, and Society (required)
• 215 Weather, Climate, and Society I, U, S, T
• 484 Honors in STS
• 485 Technology Matters (required)
• 486 Senior Project: The Craft of Research (required)
• 491/492 Independent Study

Sociology
• 131 Introduction to Sociology U
• 256 Global Health I
• 258 Health and Medicine U
• 261 Sociology of Organizations U
• 361 Substance Use and Abuse U

Course Offerings

ST112s  Science, Technology, and Society  Critical perspectives on the social aspects of science and technology in our lives, in the world around us, and throughout history. Issues include gender, communications, war, and the environment.  Four credit hours.  S.  FLEMING

ST112Ws  Science, Technology, and Society (Writing-intensive)  Critical perspectives on the social aspects of science and technology in our lives, in the world around us, and throughout history. Issues include gender, communications, war, and the environment.  Prerequisite: First-year standing.  Four credit hours.  S, W1.  FLEMING

[ST120]  Cognitive Science of Religion  Religion is deeply puzzling from the perspective of evolutionary biology. The practice of religion takes time and energy, and yet it does not have any clear adaptive benefits: evolutionarily, gathering food is more rewarding than kneeling in prayer. So, how did religion become a universal if it is so costly? We explore both the psychology of religion and recent attempts to understand its evolutionary history.  Four credit hours.  S, W1.

ST132f  Continuing Revolutions  Focuses on revolutions in their many forms: political, literary, artistic, cultural, social, scientific, and conceptual. What constitutes a revolution? How are revolutions to be judged? What revolutions do we still need to have? Involves public lectures by visiting scholars and Colby faculty, focused discussion, weekly required reflection papers, and participation in a final poster session. Nongraded.  Revolutions theme course.  One credit hour.  DIONNE, FLEMING

ST197j  Biology and Society: Pandemic Legacy  From environmental crises to medical advancements and global food shortages, the life sciences are implicated in some of today’s most pressing social issues. Using the board game “Pandemic Legacy” to examine these issues, we scrutinize how developments in biology have shaped and are shaped by society. We will address topics ranging from the role of
universities, governments, and public-private partnerships in the development of biology, to controversies about regulation, access, and the role of race and social position. We will also examine how biological facts are used to answer the question of what it means to be human.

*Three credit hours.*  
CHARENKO, LUSK

Majors may apply for admission in December of their senior year by preparing and defending an honors proposal. The honors program requires focused research conducted under the guidance of a faculty member, leading to the writing of a thesis approved by the advisor and a second reader.  

*Prerequisite:* Senior standing, a 3.50 grade point average in
the major, a 3.25 overall grade point average, successful completion of Science, Technology, and Society 485, and permission of the program faculty. *Four credit hours.*

**FACULTY**

**ST485f  Technology Matters** Seminar emphasizing classical, enduring issues involving the social study of science and technology. A senior capstone in preparation for a career. Students design, propose, and initiate a year-long project through broad reading, seminar discussions, written think pieces, a book review, thorough literature search, and preparation of a proposal and exploratory essay. Completion, typically in the spring but including a possible January internship, requires intensive research, writing, and presentation at a public seminar. Research funding may be available. Goal is to complete a project the student finds exciting and challenging and that will solidify her/his ability to conduct interdisciplinary research. *Prerequisite:* Senior standing and a W1 course. *Four credit hours.*

**W3. FLEMING**

**ST486s  Senior Project: The Craft of Research** Written and oral communication of research. Students complete a final integrative project and present three public seminars. *Prerequisite:* Science, Technology, and Society 485. *Four credit hours.*

**FLEMING**

**ST491f, 492s  Independent Study** Independent study in areas in which the student has demonstrated the interest and competence necessary for independent work. *Prerequisite:* Permission of the instructor and the program director. *One to four credit hours.*

**FACULTY**
